

SOLUTIONS FOR YOUR APPLICATION NEEDS

ENGINEERED SOLUTIONS

ROCKFORD

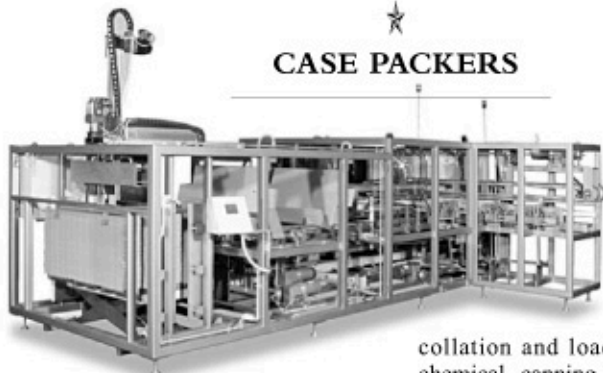

Rockford Engineered Solutions specializes in the design and development of equipment for the packaging of products into fibreboard cartons, corrugated cases or other applications where equipment is either not currently available or where the customer is looking for a "better mouse trap".

ENGINEERED SOLUTIONS

★
CASE PACKERS

Over the past several years Rockford Engineered Solutions has developed and provided equipment for the container handling operations of very slow speed through very high speed integrated robotic loading equipment. Our special equipment designs have enabled the automatic

collation and loading of products in the consumer goods, chemical, canning, home furniture, office equipment and retail markets where previously all operations were required to be performed by manual operation.

Special equipment for the handling of extreme case ranges for five panel set up, knockdown erector/sealers, wraparound case sealing applications, four panel folders with glue or tape options, and equipment which provide semi automatic operations now and are upgradeable in the future to fully automatic functioning equipment. If you are seeking "a better mousetrap", contact Rockford Engineered Solutions. Our design staff will review your application needs and determine if there is potential for developing a reliable, cost efficient Rockford Engineered Solution for your specific requirements.
